## The Hands-free Macerator for Disposable Bedpans

The state-of-the-art Pulpmatic+ offers much that is unique and special:

### Hands Free Operation

The Pulpmatic+ is the first and only macerator to use a hands-free approach to open, close and initiate the maceration cycle – a major step forward in reducing HAI's.

### Greater Capacity

The unique six bladed macerating technology, specially developed for the Pulpmatic+, allows for a greater number of utensils to be processed each cycle (up to twice that of conventional machines).

### Reduced Water Consumption

An initial dry maceration cycle (unique to the Pulpmatic+) reduces the volume of water required – so important when considering today's environmental issues.

### Automatic Disinfection Cycle

In addition to using the latest antimicrobial materials in its construction, the Pulpmatic+ is the first and only macerator to offer automatic disinfection of the internal maceration chamber. The chamber is rinsed thoroughly not only with water but also with disinfectant leaving it clean and smelling fresh.

### Improved reliability

DDC products are renowned for their reliability. Many years of manufacturing expertise enable us to select components of the highest quality and dependability. As standard, the Pulpmatic+ Macerator comes with a 2 year warranty and cost effective extensions for additional years.

### First class after-sales service support

DDC's extensive network of service and installation engineers are strategically located throughout the UK to give the very best in response times and specialist knowledge. Our engineers are:

- directly employed
- focus exclusively on sluiceroom equipment
- carry on board their vans all necessary stocks of parts, minimising machine downtime

Our engineers are the UK's leading sluiceroom experts and we genuinely believe that the aftersales service we offer is second to none.

## TECHNICAL SPECIFICATIONS

### TYPICAL CAPACITY

up to 8 pulp product utensils

### ELECTRICAL SUPPLY

Single phase: 220-240 VAC 50 Hz, 13A

Three phase: 415V 3Ph + Neutral, 6A

### MOTOR RATING

750W

### WATER SUPPLY

15mm cold water

### OVERFLOW

22mm

### SOIL CONNECTION

50mm P Trap fitted as standard

### DIMENSIONS

1040mmH x 500mmW x 600mmD

### SHIPPING WEIGHT

86Kgs
